

# MapleSure Member Directory Search and Export

|                    |                                                          |
|--------------------|----------------------------------------------------------|
| Request ID         | REQ-2026-134                                             |
| Raised by          | Group Benefits Digital Experience, MapleSure Insurance   |
| Business owner     | P. Moreau                                                |
| Domain             | Plan Sponsor Digital Access                              |
| Target application | SponsorConnect Portal (existing) — member directory page |
| Type               | Enhancement — small, single-sprint                       |
| Priority           | Medium                                                   |
| Requested date     | 2026-08-18                                               |

## 1. Business objective

Let a plan sponsor find a covered member in the SponsorConnect member directory by searching, instead of scrolling a full list, and download the filtered directory as a spreadsheet for their own reconciliation.

Sponsor administrators reconcile their payroll records against MapleSure's member directory every month. Today the directory is a single unfiltered list, so a sponsor with a large workforce scrolls page after page or phones the service desk to confirm one member's coverage.

## 2. Background and current state

- The SponsorConnect Portal already shows a member directory (/members) and a member detail page, reading all data from the claims API. Nothing changes in what data is shown — only how a sponsor gets to it.
- The directory has no search, no filter and no export. Sponsors copy names by hand into their own spreadsheets.
- The service desk receives "is this employee covered?" calls that a simple search would answer.

## 3. Requirements

1. **Search box.** The member directory page has a search box; typing a member's surname, given name or member ID and pressing Enter (or the Search button) narrows the list to matching members.

2. **Partial and case-insensitive matching.** Search matches on any part of the name or member ID and ignores letter case, so "mor" finds "Moreau" and "MOREAU".
3. **Coverage status filter.** A filter lets the sponsor show all members, only active members, or only members whose coverage has ended.
4. **Result count and empty state.** The page states how many members match ("12 of 340 members"), and a search with no matches says so plainly with a "Clear search" link.
5. **Export to CSV.** A "Download CSV" button exports the members currently shown — respecting the active search and filter — with columns member ID, surname, given name, plan, coverage status, coverage start date. Nothing beyond what the directory already displays is exported.
6. **Sponsor scope only.** Search and export return only members of the signed-in sponsor's own plans — never members of another sponsor.
7. **Export is logged.** Each CSV download is recorded (sponsor, timestamp, row count) so exports can be reviewed later.
8. **Accessibility.** The search box, filter and download button are keyboard-accessible and labelled; the result count is announced to screen readers when it changes.

## 4. Out of scope

---

- Editing member records or adding members from the portal — the directory stays read-only.
- Any change to the claims API's data model; the portal continues to read the fields it already receives.
- Scheduled or emailed exports; this release is on-demand download only.

## 5. Success measures

---

- A sponsor can find a named member in the directory in one search.
- The CSV a sponsor downloads contains exactly the members shown on screen at the time, and never a member of another sponsor.
- Reduction in "is this employee covered?" calls to the service desk in the first month after release.

## 6. Notes for delivery

---

This is a small change to one existing page and one new download route in the SponsorConnect Portal. Keep it that way: no new application, no new data store, synthetic member data only.

## 7. Sign-off

---
